

HP Injection Valve Mini-HDEV LV 8A

The Mini-HDEV LV 8A is a high pressure injector, which is developed to be used in high performance gasoline engines with a manifold injection system.

The function of the Mini-HDEV LV 8A is both to meter out the fuel and to obtain a well-defined mixture of fuel and air. It is an inward opening solenoid injector which is optimised regarding very short opening and closing times, which ensures a very stable linearity at short injection times. It is suitable for a standard peak and hold power stage based on 12 V.

Its most remarkable features are the small size and weight. Another benefit of this injector is a high spray variability concerning spray angle and spray shape. Also the flow rate can be defined in a big range. An additional advantage of this injector is a high accuracy regarding leakage and linearity.

Application Hint

The injector can be supplied by a peak and hold power stage with maximum 8 A @ 12 V.

If your application conditions will not match the listed performance data, please ask for consultancy at Bosch Motorsport.

The injector can be cleaned (mechanically or chemically) if the tip will not be damaged.

Do not use supersonic cleaning.

Please find further application hints in the offer drawing (<http://www.bosch-motorsport.com>).
